

Mammutico®

PERFECT™

ONE SHAPE ...

ENDLESS POSSIBILITIES!

ABOUT MAMMUTICO FOAM™

Mammutico Foam™ from which our blocks have been made **has been tested** by Polish and international laboratories, such as: TUV Rhinland, Intertek, Sychta and Instytut Sportu.

Mammutico sets **meet all necessary requirements** regarding safety norms for toys, which is confirmed by the declaration of conformity added by us to each purchased set.

FOAM FEATURES

- 

It's QUICK-DRYING
Wet blocks dry up very fast. To speed it up, just wipe them with a dry.
- 

It's VERY LIGHT
Even the youngest children can join in the fun!
- 

It's WATERPROOF
Thanks to this the blocks are also perfect for playing in the garden or in a swimming pool!
- 

It's EASY TO CLEAN it
Just wipe the blocks with a wet cloth and that's it!
- 

It's PLEASING TO THE TOUCH
Nice material without sharp edges and rough surfaces which can harm skin.
- 

It's FROST-RESISTANT
It can be used even in winter. After 24 hours in a freezer the foam will not change and it will always remain equally good.
- 

It's SAND-RESISTANT
It doesn't have any gaps or cracks in which sand could go.
- 

It's UV-RESISTANT
No matter how long you expose the Mammutico foam to the sunlight it remains unchanged.

Safety of the products is guaranteed by close cooperation with specialists from the Centre for Play-ground Inspection.

ABOUT PERFECT™ TM BLOCKS

All blocks in the PERFECT™ series are the same. **Each is 49 x 9.8 x 4.9 cm** and has three holes where you can put more blocks. The industrial design of the blocks is registered and legally protected.

There is a filling with dimensions of 9.8 x 4.9 x 4.9 cm in each opening. These additional elements can perform several important functions. The most important feature is the possibility to connect two bricks. The second is blocking. - By inserting the element vertically or horizontally into the holes of the block, we prevent the structure from „sliding”. The fillings are also decorations, and they perfectly stabilize the blocks that are the basis of a larger building.

The blocks are made of flexible foam, so they can be bent and twisted as required, as they will eventually „return” to their original shape.

Below we present examples of various and non-obvious combinations of blocks as well as some ideas of using the fillings.

Two-color sets are available **as standard: yellow and gray**, which we usually have in stock. Red, blue and green versions are made to order, depending on the size of the set.

ENDLESS POSSIBILITIES!

The PERFECT™ line consists of **one type of block** with fillings. The only difference between the sets is the number of elements.

The main feature of these bricks is simplicity. Their shape gives you **infinite variants of constructions!** The structures are created in stages, when children discover new possibilities of connecting elements and the flexibility of the blocks during the game.

While playing, the largest set takes up the entire space, but when folded, it takes up much less space. Each set comes with we a guide with some sample structures, and ways of creating them. **The instructions** are a great tip to discover the possibilities of the blocks, but most of all they are a perfect tool for animators and teachers.

PERFECT™ blocks, like all Mammutico® products, prove themselves when playing **indoors, outdoors** and **in the water**.

„These blocks are great for organizing construction workshops and other creative activities. The elements are small, light, and safe, thanks to which even three-year-old kids can connect the elements easily. On the other hand, the instructions and sample buildings inspire the participants of the game, at the same time making them even more willing to work.”

Marta Zielska,
rehabilitation educator, animator of games for children,
mother of three kids.

“Kindergarten principals are concerned about safety and maintenance. PERFECT™ blocks can reconcile a child's need to build and create their own spaces with an adult's need to provide a safe place to play. The main advantage of these blocks is their size and, at the same time, low weight. Children can build a large structure relatively quickly and fill the entire space with it.”

Anna Komorowska
landscape architect, podcaster,
and a mother of two children

Set

PERFECT 40

2

PERFECT 40 set

Children use blocks to build utility toys or the things and objects they can see around them. What is the difference? You can play with a practical toy HERE and NOW! In the case of PERFECT™ blocks, the best and simplest example will be a sword, and one of the most demanding construction - a house. Among all the created objects there are some which created those that please the creator's eye. These can be furniture, small castles, monsters, people, or enlarged everyday objects.

It may seem that forty bricks is not that many... But this set allows children to build basically everything that comes to their minds. We even found a way to make a house - for one person and without a roof, but what is imagination for!

PERFECT 40 is a set that two people can play freely.

Gross price: 1 659,00 PLN

little house...

a DRAGONFLY :)

a SAN!

The youngest children usually build simple and easy things. It is important for them to be able to play right away because toddlers have no patience with complex constructions. The greatest fun for them are toys made on their own from two or three bricks. A hammer, a cross and a sword are very popular. An interesting option is also a dragonfly, a vacuum cleaner, a plane, a small gate, a fire, and even a straight path ...

From forty bricks, we managed to build various animals, dollhouses, a scooter, a helicopter, a motorbike, a plane, a boat, an armor, a humanlike figure, and a solid (utility) chair with a backrest.

Set

PERFECT 80

This set gives the youngest practically unlimited possibilities during free play. There are few children under 12 years of age who can build structurally advanced structures with these blocks without instructions or help from elders. Even adults, without any additional prompts, did not notice the many connection possibilities!

Our observations show that during unrestricted play, children are not able to use all 80 bricks, although they build what they want with great commitment and ingenuity. However, when they are given instructions or only pictures of the building, work begins to take a new direction...

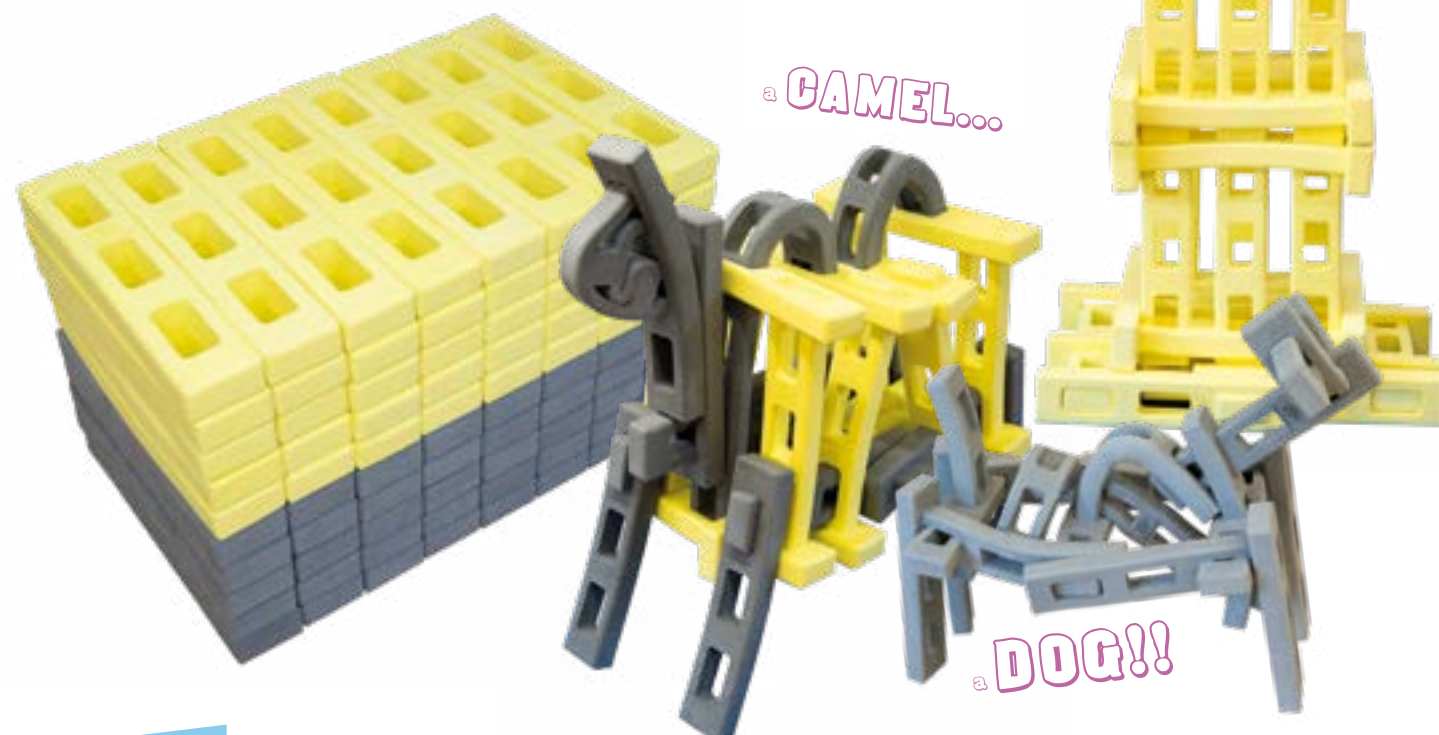

PERFECT 80 is a set that four people can play freely.

Gross price: 2 999,00 PLN

BIG BEN?!

a CAMEL...

a DOG!!

a TURTLE?

Older children usually start with the construction of a house or base. They can use the instructions included in the kit. Often there are also ideas for some square objects (an armor, chests, furniture, a robot, a giant telephone, etc.) and for undefined structures made of basic connections.

Using this set we have built, among others a teepee tent (you can find it at the end of the catalog), famous landmarks such as BIG BEN or the Palace of Culture, a choo-choo with one wagon, chairs, stools and sunbeds, a town with houses and finally a large cog wheel that can roll on the floor!

Set

PERFECT 160

It is difficult to find any construction that will engage all the bricks from the PERFECT 160 set! This is a tool for real architects! A group of children who will receive instructions to build a large and interesting structure will have their hands full. After all, these are not giant bricks, but they are used to build huge structures! Then the work may take a long time, but the results will certainly reward this effort.

While playing with this kit, we observed children, and even whole groups, using the instructions until they found that at some stage, they had a better use for what had been built. Then they took a new direction of creation. Adults hardly came up with such ideas...

PERFECT 80 is a set that eight people can play freely.

Gross price: 5 980,00 PLN

a TUNNEL...

a PLANE
OO

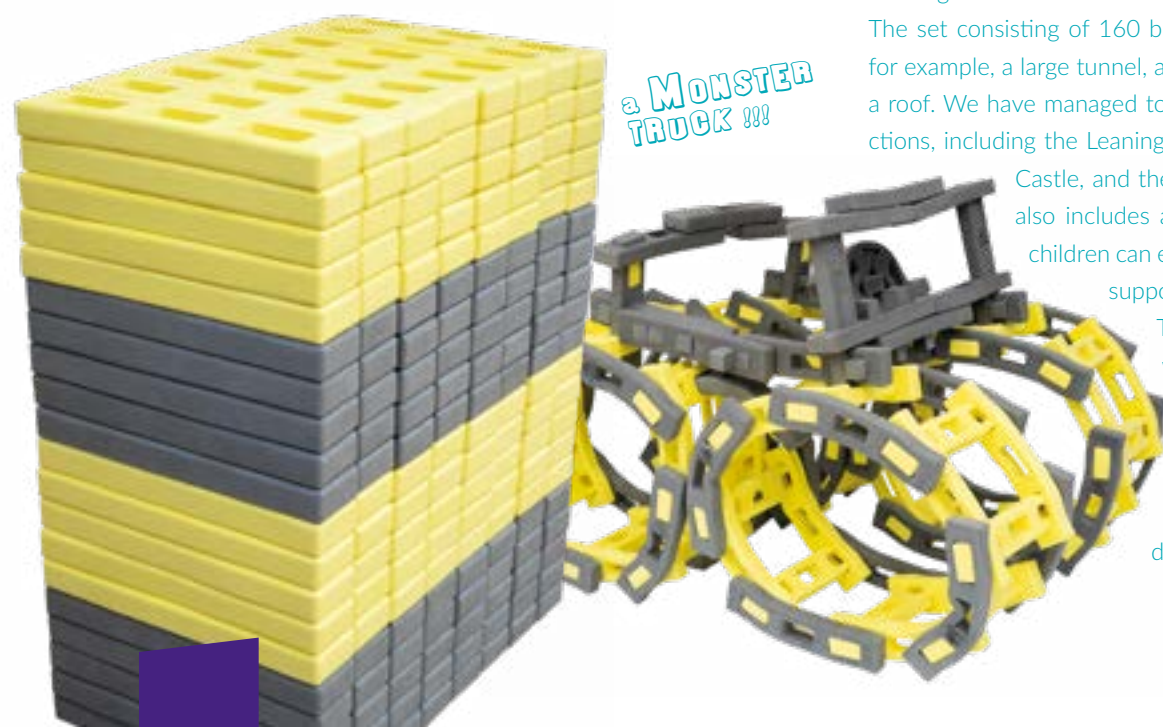

an Eiffel Tower?

a MONSTER TRUCK !!!

Even the simplest instructions give children tips on how to build a wheel for a car, a round roof, an arch and other non-obvious shapes. At almost every stage of the instruction for a slightly more complicated building, children can make up some other interesting items. The most popular are various bases and houses, and these can be converted from almost all larger buildings.

The set consisting of 160 bricks allows you to build, for example, a large tunnel, an igloo, and a house with a roof. We have managed to build a lot of reconstructions, including the Leaning Tower of Pisa, the Royal Castle, and the Triumphal Arch. The list also includes a variety of vehicles that children can enter and move around by supporting them at their sides.

The most impressive, however, is the Eiffel Tower reaching the ceiling and a ball with an opening, which can accommodate up to three children!

Set

PERFECT 300

This is a set designed for sixteen people, but in the case of younger preschoolers, the group can be even larger. Young children do not have much patience and build objects to play with, which are small and simple.

This set is perfect for organizing creative workshops. The number of elements is enough to divide the whole class into groups and give instructions. Building a decent chair from 30 elements is not so easy and fast. The most popular topics of the classes are architecture, means of transport, furniture and everyday objects.

PERFECT 80 is a set that sixteen people can play freely.

Gross price: 9 998,00 PLN

a STADIUM!?

an IGLOO !!

a car...

a helicopter?

a TRAIN !!!

a CASTLE!

With this set, more blocks simply mean more buildings. It is difficult to create a single object using all 300 elements.

The largest building that we have built so far using PERFECT™ blocks is the train shown in the picture below, driving along the track laid on the viaduct. 300 bricks will certainly be enough to arrange a sample room or plan a town with streets.

a helicopter?

a TRAIN !!!
